GENERAL INFORMATION

All of these parts may scratch and bend, great care should be used in handling them.

If you encounter any problems, need clarification of these instructions or are not qualified to properly install this kit, contact you local distributor or dealer.

Read this instruction sheet in its entirety before beginning the installation.

ALL WARNINGS AND PRECAUTIONS IN THE INSTALLATION AND OPERATION MANUAL PROVIDED WITH THE APPLIANCE APPLY TO THESE INSTRUCTIONS.

TURN OFF THE FIREPLACE AND ALLOW IT TO COMPLETELY COOL BEFORE PROCEEDING.

INSTALLATION INSTRUCTIONS

Step 1. Remove the face from the box (item #1 in ***Figure 1****)* and place the face down making sure that the side with the studs are facing upwards. Be sure that the front of the face is lying on a soft non-abrasive surface to avoid any scratches to the surface of the face.

Step 2. Remove the insets from it's box (item #2 in ***Figure 1****)*. If you have chosen a brushed nickel, black nickel or gold insets there will be blue protective tape on the side that will be directed towards the front of the appliance or facing away from you as you are doing this procedure. If you have chosen black insets either side can face the front of the face. Make sure the upper and lower inset patterns are facing the same direction so they appear the same when the face is installed on the unit.

Step 3. Next place the classic or arched insets holes over the studs along the top and the bottom designated studs. There are six studs on the top of the face to mount the top inset, and there are 4 studs on the bottom of the face to mount the bottom inset (See ***Figure 2*** for top stud location and see ***Figure 3*** for bottom stud location). The nuts to fasten the insets to the face can be found in the box the face came in.

VERY IMPORTANT: SCREW THE NUTS ONTO THE STUDS "FINGER TIGHT" ONLY. MAKE SURE THE FACE AND THE INSETS ARE NOT BOWED BEFORE TIGHTENING. THEY MUST BE STRAIGHT BEFORE THE INSETS ARE SECURED TO THE FACE. AFTER FINGER TIGHTENING THE NUTS YOU MAY NOW SNUG THE NUTS SLIGHTLY. OVER-TIGHTENING THE NUTS WILL RESULT IN DAMAGING THE STUDS AND THE FACE.

NOTE: DIAGRAMS AND ILLUSTRATIONS ARE NOT TO SCALE.

Step 4. Included in the face box are two mounting brackets that attach to the top of the face. There is a left and a right hand bracket. When the bracket is installed on the face the lower left hand corner of the bracket will have an angled edge that will be facing towards the outside of the face. The mounting brackets for the **Ravelle™ 30** Arch face uses the smaller brackets with a measurement of 2 inches across the top (See ***Figure 4B***, item #1). The mounting brackets you will use for the **Ravelle 30** Classic face will be the longer brackets with a measurement of 3-1/2 inches across the top (See ***Figure 4B***, item #2). Place the correct bracket onto the studs shown in ***Figure 5***. Thread nuts onto the studs finger tight only (see ***Figure 5***).

Step 5. Remove all protective film material from the face before installing it on the fireplace. Remove any finger prints or smudges from a plated face before burning the fireplace. They can be removed using denatured alcohol or household glass cleaner and a soft cloth. Marks left on these surfaces may become etched into the finish if not removed prior to burning the unit. Never use brass polish to clean the plated surfaces.

Note: Ravelle™ 42 Arch and Classic faces both use the same mounting brackets.

Face Installation

A number of different faces are available for the Ravelle 42 fireplace, however all the faces are installed in a similar manner. A total of four screws, two upper and two lower, attach the face to the fireplace. To install the face:

Step 6. Locate the two screws found in the hardware bag shipped with the face. Position the face (with the lower door open) in front of the fireplace. Install the two screws shown in ***Figure 6***, through the holes in the lower door hinge bracket and screw them into the captive nut on the tab (see ***Figure 6***). Do not fully tighten these screws yet.

Step 7. The bracket shown in ***Figure 7*** is installed on the face during the face assembly (see the instructions on the previous page). The captive screws, shown in ***Figure 7***, on this bracket need to be screwed into captive nuts on the fireplace as follows; Align the face for plumb and level, then using a phillips head screwdriver (inserted through the vent holes in the face), tighten all four screws.

Caution: Any masonry that has been cleaned with an acid wash must be properly neutralized before installing the fireplace face. The acid wash will tarnish the face. Consult your masonry installer.
